This is YOUR chance to join the Service Science Factory for two new projects:

Code² Implementation

The "Big Data Landscape" is growing rapidly. In South Limburg numerous experts, professionals and academics are working on related projects. A first SSF project has shown that there is great demand for a connector and facilitator in the Big Data community. The concept for a Big Data Center - Code² - has been developed. Now we'd like to plan the implementation of this Big Data center in South Limburg.

If you are interested in the data analytics, business intelligence, mobile services, project management or website development, come and join us in this exciting new project!

Expertise needed:

Law (IP); IT (Data Analytics, Databases); Statistics; (Governmental) Fund Raising; Project Management; Marketing

Service Innovation Design
Creating an Assessment Tool for Companies

This project aims to develop an (online) analysis tool for assessing a company's current 'Service Innovation Design' capabilities. The tool will help a company to see where to improve and what to foster, taking into account several dimensions of the company's strategy, resources and capabilities in the area of service and customer centricity.

The final result of the project should be an overview of the analysis tool: the process (How?), the content (What will be assessed?) and the final output (What is the result?).

Expertise needed:

Marketing; Organization & Strategy; Service Design; Graphic/Interface Design; Human Resources

APPLY NOW: Send your CV and Motivation Letter (indicating for which project you apply) to:
